ISSUE:

A resolution authorizing the purchase of a software upgrade for the current reporting system for the West Valley City Fire Department.

SYNOPSIS:

The purchase of the upgraded software will allow the department more functionality than we currently have available. The upgrade allows us to assure that each station and unit has the ability for inputting all reports which we must complete. With the new Federal Standards for EMS reporting this system will assure that we are in compliance with the standards.

BACKGROUND:

The fire department has been utilizing the Firehouse Software for about 10 years. The system gives the department the ability not to only input reports but gain valuable reports and statistics on our operations. This new version being web based will now allow us to complete reports in the field from our units. This will cut down the time we are inputting reports in the station. The order will also include the company setting up the initial system and some onsite training.

RECOMMENDATION:

The West Valley City Fire Department recommends the purchase of the software for the amount of 30,164.00 from ACS Government Systems.
